

Ryan Loper Senior Data Analyst | Systems Architect | SQL Developer
Fort Worth, Texas | RyanELoper@Outlook.com

ABOUT I've spent 15+ years solving messy data problems at scale—from global manufacturing logistics at Dell to healthcare analytics at Centene. My work lives at the intersection of database engineering and business impact: I'm the person who figures out why the numbers are wrong, fixes it at the root, and builds something that doesn't break next quarter. I take data integrity seriously and I'm just as comfortable writing a complex Teradata query as I am rethinking the system architecture behind it.

TECHNICAL STACK

- **Databases:** SQL Server (T-SQL, SSIS), Oracle, Teradata, MySQL, MS Access
- **Languages:** SQL (DQL, DML, DDL), Python, VBA, Excel (Power Pivot/VLOOKUP), SSIS
- **Tools:** Tableau, Visual Studio, SharePoint, Toad, MySQL, MS Office, Microsoft SQL Server,
- **Focus Areas:** ETL EDI, Optimization, Data Warehousing, Dashboard Development, Inventory and enrollment Systems, AI & Automation

PROFESSIONAL EXPERIENCE

El Guapo's Plethora (Technical E-Commerce) | Systems Architect & Owner | 2024 – Present

- Built a relational database from scratch to manage, grade, and track 1,000+ high-value electronic components and specialized vacuum tubes integrating Ebay API's.
- Replaced a patchwork of legacy spreadsheets with a SQL-hybrid system that cut listing latency by 40% and provided real-time visibility into sell-through rates.
- Integrated the Pirate Ship shipping API to automate fulfillment across eBay and Sweetwater storefronts, ensuring data integrity without manual reconciliation.
- Applied market trend analysis to identify high-velocity inventory lots, maximizing capital recovery and keeping the business lean during market fluctuations.

TxDOT (Contract) | Cyber Security Consultant | 2020 – 2021

- Partnered with Risk and Compliance to audit data quality across Texas IT initiatives, aligning departmental data with state cybersecurity and integrity standards.
- Designed a centralized SQL data repository that provided a single, trustworthy "Source of Truth" for executive-level reporting and decision-making.

Centene | Senior Healthcare Analyst | 2016 – 2019

- Cut data processing time by 30% by refactoring slow-running SQL queries and tightening ETL pipelines in Oracle and Teradata—implementing fixes that eliminated recurring timeout errors.
- Developed Python scripts to monitor and verify report delivery in real-time, enabling immediate failure alerts and reducing client-reported data gaps.

Dell | *Global Fulfillment Adviser & Business Analyst* | 1997 – 2016

- Engineered a logistics database that automated order performance tracking and recovered \$25,000 in daily write-offs—a high-impact system that scaled with Dell’s global operations.
- Led the migration of aging MS Access databases into scalable SQL reporting servers to support global manufacturing and logistics teams.

ADDITIONAL EXPERIENCE

Specialized Care & Advocacy | *Primary Coordinator* | 2021 – 2024

- Managed full-time care coordination and high-complexity logistics for a family member receiving specialized developmental therapy.
- Note: Successfully returned to full professional availability in 2026.
